

The Streetwise Road Safety Show technical requirements

The show can be performed in most venues, however we do have certain space requirements.

This is a full theatre show with a full set including: backdrops, computer controlled effects, a PA system with radio microphones and large props.

Due to the physical set size and audience safety we need a clear, floor level minimum performance area of: 7 metres (23ft) wide by 5 metres (16ft) deep with a 3 metre (10ft) ceiling clearance.

Important: This show cannot be performed on a raised stage

We also require access to a standard 13amp socket outlet.

Please see aerial plan below of the performance area footprint.
